Users can also look for other types of constructional stabilization rules for leveling up the demographical dilemma of currency investment. This is a substantially amazing investment unit that proceeds to help in the decentralized investment system while introducing innovative ways to securely multiply your funds.

Cryptocurrency operates through a cryptography technology, which constructs a security key and a blockchain system that allows anonymous consumption of these coins while maintaining the transparency of transactions.

## History of Cryptocurrency (Bitcoin)

A cryptocurrency is a form of digital currency investment system, which initially became popular in 2009, soon after the launch of Bitcoin which was founded by Satoshi Nakamoto. The main intention of this system is to bring back full control and ownership of the user's finances back in their hands. This investment network can help users make double, triple profit within a few hours. It typically works similar to stock market, fluctuating with the market value, but it doesn't convert user profit into fiat money, instead, it encourages use and consumption of digital coins.

Currently, Cryptocurrency market is dominating the world economy, where millions of investors have managed to make a significant amount of profit out of it. Several studies have found that users spend more electricity and internet data on the investment of cryptocurrencies than on the operating a business. However, this widespread popularity of Bitcoin and other altcoin has showcased a decline in the past few years.

### **Our Unconventional Design**

These facts make the ideology of such digital currency unfathomable in the sphere of justification of its direct purpose – it is decentralized, as the possession and the distribution of the funds do not make contact with any external factors. ## **Opinion Coin Features**

### **Reasons to Covert your real-world coins into crypto-coins**

#### **Instant Money Transfer**

Experience high-speed money transfers on our easy to use investment platform without getting tangled under any legal laws, currency exchange fee or geographical boundaries.

#### **Easy Investment**

Users can enjoy secure investment anonymously without revealing their identity. Our networking protocol works with cryptography that generates a unique security code for each user.

#### **Decentralized**

Enjoy decentralized control of your finances without any outside interference be it a central authority or financing house. We give you 100% privacy and freedom.

### **100% Secure**

Opinion coin developers have taken into consideration multiple flaws of previously existing cryptocurrency exchange modules, making its highly efficient, and user-friendly, secure, and private.

### **C-CEX – Exchange Portal**

C-CEX is an exchange portal used by Opinion Coin's to provide its user with a stable, private and secured trading environment.

### **How does this exchange system works?**

**Step 1:** First In order to buy Opinion Coin, user needs to download Opinion Coin wallet, which is provided on the website (<http://opinioncoin.com/>).

**Step 2:** The downloaded wallet will automatically generate an ID to identify the user; this ID then should be used to register on the exchange system used by the company that in this case, is C-CEX ([c-cex.com](http://c-cex.com)) or the user also create a new account on C-CEX. Once the process is complete, users can start receiving or sending their funds.

### **Our Growth**

Opinion Coin is overwhelmed with investors' response to its recent coin offering, in which 20% of its coins are sold already. Opinion Coin is soon coming back with its coin offering to grant opportunity to users to generate profit with its prodigious venture. So, join Opinion Coin in the evolution of transforming the world of the blockchain.

## **Upcoming Projects**

### **App Development**

An Innovative Concept of Cryptocurrency App

That lets you Make Payments directly from your Smartphone

Opinion Coin is working on developing a wallet for its Smartphone users so that it becomes more accessible to them. Not only will it make exchange easy but it will also prevent your wallet from any theft or fraud.

Working on some other projects then the extensile protocols can be a bit challenging making people feel better about their content and integration. Our exchange system is working towards introducing new innovative measures that can help in making the exchange more efficient.

**COMING SOON**

### **Coin Model**

Opinion Coin is a blockchain based peer-to-peer, digital currency, which has been designed to help users exchange money online from anywhere in the world at an affordable price. Our coin model imitates Bitcoin, as well as has some unique technology that makes it more secure and private for the investors.

### **Resource Usage**

Blockchain resources are constrained, which needs a structured system to prevent it from abuse. Opinion Coin is registered on C-CEX which is a secure, private, network that encourages exchange. Opinion coin's exchange is operated through this network.

Currently, we only offer a web-based wallet on Windows and Linux. But our developers are working on an Android Wallet which is expected to be launched soon.

### **Decoding Crafted Technology**

Bitcoin was launched in 2009, and since then it has made several mistakes and its users have also showcased several concerns underlying the structure, security, and usability of cryptocurrency.

Cryptocurrency exchange is built on a decentralized structure that integrates on technical algorithm based exchange which allows users to trade anonymously. Each user generates a new ID during an exchange, which makes it impossible for any particular user.

### **Receiver Pays**

Traditionally, when we think about business, we think about capital, employees and unlimited miscellaneous expenses. But with cryptocurrency, you can build an empire without dropping a single drop of sweat. Contradictory to traditional believes the digital currency is an efficient, effective way of investing and exchanging funds worldwide.

However, this also becomes a major concern for its users because of the decentralized design that prevents them from ever trusting it completely. Opinion Coin is registered on C-CEX, and also offers a wallet to integrate exchange amongst its users. Users can use this wallet to exchange, manage, or store their coins according to their requirement.

### **Advanced Secure Infrastructure**

Opinion coin developers have taken into consideration multiple flaws of previously existing cryptocurrency investment modules, it means that Opinion coin is reliably more protected against external hacker attacks, and thefts, however, this high-quality security is available for the user when they comply with all of terms and conditions of confidentiality.

## **Investment Modules**

The Opinion Coin is a peer-to-peer blockchain investment system which is, sponsored by Opinion coin community investors who provide a user-friendly platform for cryptocurrency investment while setting governance standards and investment ratios for projects that are later supported and run by Opinion Coins.

## **Our Team Advisors**

We are blessed that we were able locate highly skilled team with combined experience in finance, marketing and technology. Work with us to experience efficiency, innovation, and creativity in your project.

## **Governance**

### **Opinion Coin Governance**

Opinion Coin is a decentralized exchange system which is completely operated by its users. These users handle their account independently and use their services using the features and the software that they prefer.

### **Cryptocurrency Community Governance**

Governance is a collective measure that helps in the acknowledging the rights of the users as well as the organization. Governance basically underlines the control of the organization and the user in the market.

Expect your users to deliver engaging content that can provide with apt protocol to move further in the world. When you focus on the structure of security you will notice and identify that it requires a certain level of transparency to attain the confidence of the targeted user.

## **Implementation Weakness**

We understand that this product's implementation won't create a completely trustless cryptocurrency system immediately. Mainly, because users are more likely to trust popular cryptocurrency names like Bitcoin, Ethereum instead of Opinion Coin. And potential investors might even be skeptic about choosing us over the corresponding legacy of the banking institution that is ruled and protected by reserve bank.

However, this weakness runs in all exchanges and wallets making a recurring issue for everyone. Users who consume these services will remain surrounded by the following risks.

- They could go bankrupt
- Their online wallets could go insolvent
- Their bank might confiscate the funds or freeze
- The risk of online hacking and theft
- The possibility of data leak

## **Market Risk**

Cryptocurrency follows the collateralization method wherein the assets of users are always at the stake of moving in the adverse direction of the initial cost of the asset. Opinion Coin also follows this flow of market risk investment, which fluctuates according to its own demand and supply. This can help the user in generating an immense amount of profit as well as loss. Additionally, cryptocurrency's overall approach suffers because of pricing and liquidity constraints. This occurs due to two reasons, one being the insufficient availability of fiat currency in comparison to digital currency and two, being the limited acceptance of cryptocurrency in exchange for products and services. A huge section of the population has still not accepted it as a secure exchange alternative for fiat money.

## **Future of Cryptocurrency**

We, as a community need to integrate with the system to make more and more compatible exchange modules which help altcoins grow in the market. The challenge is to come with a technology that can make digital currency transfers quicker while enhancing the security of its interface. A major section of the population still refuses to evolve the changing currency because of its uncertain structure which prone to theft. The loss of data and coin can also occur during exchange if the user's network connection doesn't remain constant. This is one of the biggest drawbacks of cryptocurrency.

Bitcoin and several altcoin developers are working towards finding a balance to control and manage these network errors. Thousands of cryptocurrency users end up losing their fund due to the network issue. These coins float in the digital currency network freely and the exchange has not completed.

## **New Payment Possibilities**

Cryptocurrency is designing new, creative online services which were not present earlier because of economic limitations. This includes several services like automated payment solutions, payment time locking, tipping systems, micro-payment channels, low-trust escrow services and public asset tracking.

## **Disclaimer**

The investment made by the users are made by them willingly, the company doesn't take any responsibility for the profit or the loss incurred by them. Cryptocurrency market is not a safe bet in which nor do the company or the people associated with it take any responsibility for the user's finances.

All of these policies are responsible for constructing a project that is for people's investment welfare; however, some of these policies might change or get revised anytime without any prior warning.

## **Security and Privacy**

Opinion Coin is designed with blockchain technology that allows users to anonymously exchange funds without sharing information of the parties involved.

It is designed to boost privacy amongst users while managing their finances. Opinion Coin with its cryptocurrency exchange technology seeks to build an affordable trade ecosystem.

## **No Warranties**

Opinion Coin or its distributors hereby disclaims and do not purport or make any warranty, representation or undertaking for any entity or person or their funds.

## **Transparency**

Opinion Coin hereby disclaims that it does not keep 100% transparency in the market. However, these subjects kept private from the public usually include company's internal secrets which usually don't affect the users.

The information herein lists the rights of Opinion Coin over the investors' information which can be used by them, till their agreement period.

## **Risk Factors**

Users need to understand that cryptocurrency works are slightly similar protocols as share market. Users also need to understand that this can be a risky endeavor wherein they might not be able to retrieve their money or transactions. The transactions made to investment cryptocurrencies are irreplaceable.

Users should also ensure that they are aligned with the system's protocols so that they are able to start the query without any worry or confusion so that it is able to deliver the right results.

## **Accuracy of Information**

While this white paper has been drafted in goodwill, the content of the document has been developed using the resources of a third party. Users who are even slightly skeptic about investing or are unable to understand any policy herein are suggested not to invest in it at all. The information provided in this white paper is also subject to market changes. The company will also not be responsible for any form of changes made by the government of user's nationality. Any sort of participation in cryptocurrency investment is seen as a deliberate choice made by the user freely. So, if it goes against his country's norms, he/she is the only one who will be held responsible for the outcomes.

## **Current Restraints of Blockchain System**

As we are aware that there are only a few merchants around the world who accept cryptocurrency, let alone altcoins to initiate sale online or offline. It becomes a major problem for cryptocurrency users to consume these coins in the real world. Though digital currency is a more affordable exchange module, people still prefer to use fiat currency exchange online because of its safer vibe. Cryptocurrency world has been going through a scandalous phase where its changes are being minutely tracked by the people.

Cryptocurrency is also a decentralized exchange system, which takes around 10 minutes or more to confirm a payment, depending on the coin and public exchange, this wait makes it a little frustrating for most users. We can't ignore the fact that digital currency is also prone to more thefts and fraud, because of its online setup.

Opinion Coin has kept these factors in its head while developing its coin, ensuring to make it as secure as possible using the most advanced technology available in the market.

### **Conclusion**

While the cryptocurrency market is constantly rising there are still a few problems with it that prevent it from mass adoption. While it's decentralized structure is a catalyst of democratizing money, its production, use, and supply is highly fragmented, making it a victim of its own success. Nobody owns or directs this market leaving its doors open for fraud, hacks, thefts etc.

In case the user ends up losing his/her account or password in any such scenario. They will be held responsible for their loss.
